MAHA

Beyond pH Control, Elevating Crop Performance

In the dynamic world of agriculture, innovation plays a pivotal role in shaping the future of crop cultivation. Maharasa Agritech Pvt Ltd introduces MAHA, a groundbreaking agricultural solution designed to redefine the way we nurture our crops. MAHA is a unique pH harmonizer, offering far more than traditional pH control. This innovative product optimizes nutrient absorption, improves root growth, and fosters sustainable farming practices, making it an indispensable tool for modern agriculture.

**Unlocking Nature's Potential,
One Drop at a Time!**

Why You Need MAHA:

- ✔ **Overcoming Alkaline Water:** MAHA adjusts water pH for optimal nutrient absorption (6-6.5), unlocking crop potential in challenging conditions.
- ✔ **Enhancing Crop Yields:** MAHA boosts nutrient absorption and root growth, increasing crop yields, profits, and food security.

Key Benefits:

- ✔ **Balancing the pH:** MAHA balances pH (6-6.5), enabling nutrient uptake, boosting crop performance, yields, and sustainability.
- ✔ **Enhanced Nutrient Absorption:** MAHA enhances nutrient absorption, fortifying plants for resilience against stressors, promoting healthier crops.
- ✔ **Promoting Sustainability:** MAHA champions sustainability by improving nutrient efficiency and reducing agrochemical impact, ushering in a greener agricultural future.

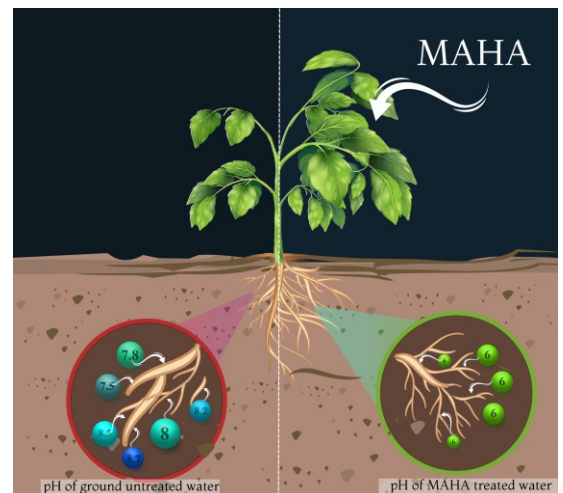

Features:

- ✔ pH Harmonizer and Nutrient Mobilizer
- ✔ Resolves alkaline water challenges by harmonizing pH (6-6.5)
- ✔ Optimal nutrient absorption for healthier, high-yield crops
- ✔ Robust root development and disease risk reduction
- ✔ Promotes sustainable farming practices
- ✔ Innovative solution for modern agriculture
- ✔ Paves the way for a more abundant and eco-friendly harvest

Application Guidelines:

Soil Application: Use 1 liter of MAHA per acre via drenching or drip irrigation. Mix with water-soluble fertilizers, micronutrients, and biostimulants for optimal nutrient uptake, ideal for saline-alkaline soils.

Foliar Application: Dilute 100-250 ml of MAHA in 200 liters of water. Combine with agrichemicals, fertilizers, micronutrients, and biostimulants for robust plant growth.
